

KDE-null taxonomy + GMM-BIC + finite-size falsification

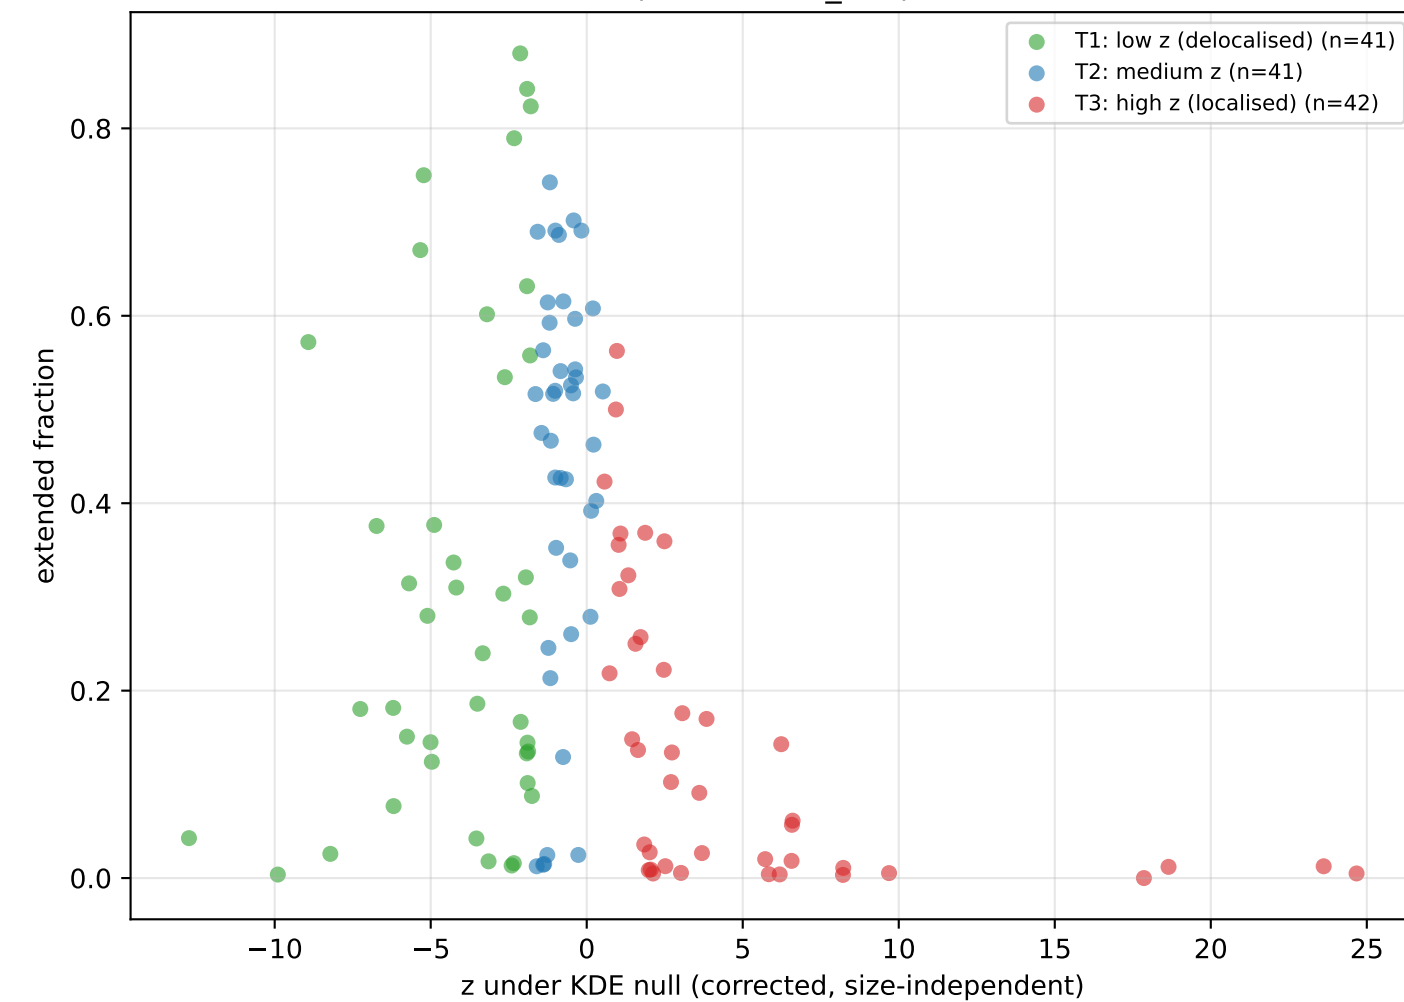

(a) KDE null vs bbox null
corr = 0.843, shift = -3.21

(b) GMM model selection on (z_kde, ext_frac)

(c) Continuous taxonomy plane
(tertiles of z_kde)

(d) Finite-size falsification of type C
hyper-localised cities downsampled — do they fall into T1?
